

BRINGING EFFICIENCY TO NYC

builddee enables the City of New York to centralize strategic energy management planning to tackle municipal climate action goals, comply with ordinances, and reduce operating expenses.

Global Leaders

New York City has joined global climate change leaders to reduce city greenhouse gas (GHG) emissions 35% below 2005 levels by 2025 and 80% by 2050. Seventy-three percent of their citywide GHG emissions are produced by one million buildings that require deep energy retrofits to meet these targets. To meet long-term targets, more than 30 city agencies have become the catalyst through participation in broader benchmarking and energy audit ordinances, implementation of energy efficient projects, and drivers of a new workforce.

Uncover energy efficiency

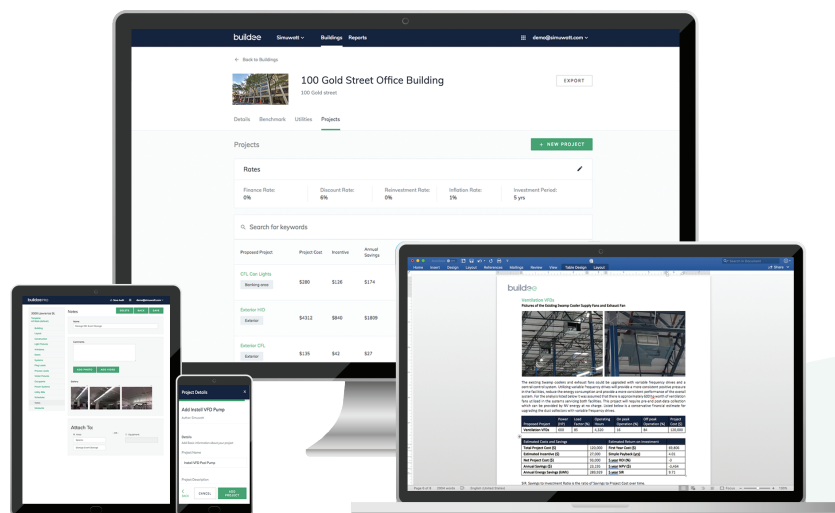

The Challenge

The NYC municipality faces multiple complex data, personnel and budgetary challenges on the path to managing their 4000+ buildings:

- Identify, plan and track projects to reduce GHG emissions and opex.
- Optimize project funding programs.
- Comply with local laws for benchmarking (LL84) and energy audits (LL87).
- Centralize data for portfolio-wide insights.

The Solution

With builddee, the NYC municipality has centralized energy management to plan and track climate action plan goals, reduce opex, and comply with local laws. The builddee platform brings together existing disparate NYC data by API and field tools, energy engineering intelligence, a library of local curated utility incentives, connections to ENERGY STAR Portfolio Manager for benchmarking, and powerful reporting tools to enable the city, agencies and vendors to act and measure performance. builddee solves the complex data issue so NYC staff can focus on meeting their goals.

Our Roots

Behind builddee is the work of the greatest minds in building sciences and partnerships with market drivers. We've dedicated our lives to enabling a broader market to capture energy savings and leave a lasting legacy.

SOFTWARE PLATFORM

buildee

buildee

- Centralize energy management planning
- Benchmark with Energy Star Portfolio Manager
- Assess your assets with desk and field solutions
- Analyze retrofit investment potential
- Track retrofit performance through the lifecycle
- Calculate GHG emissions

buildee Library

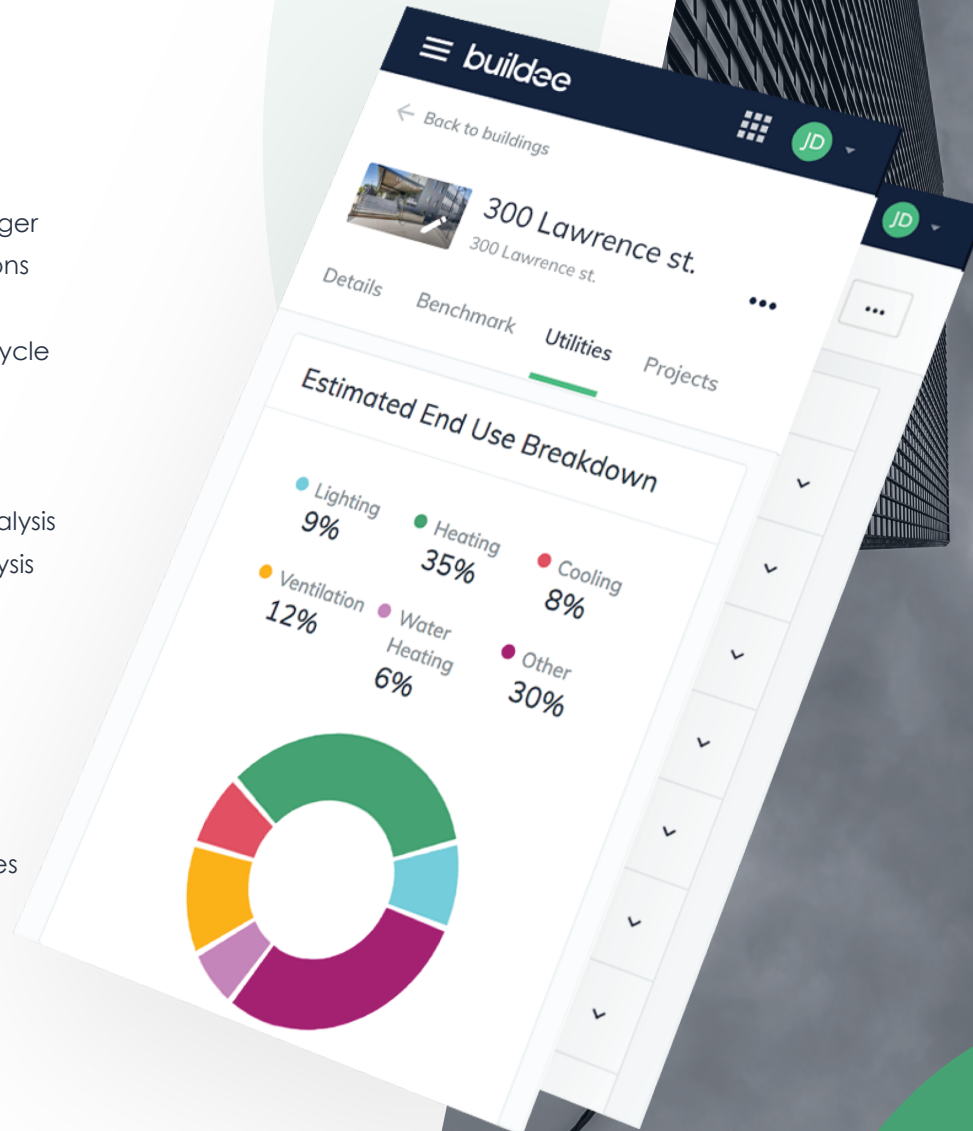

- Access industry standard retrofit project analysis
- Integrate your recommendations and analysis
- Access a curated utility incentive library
- Compare products and solutions

buildee Reports

- Standardize reporting across stakeholders
- Generate compliance reports
- Brand and design unlimited report templates
- Flexible export to Microsoft Word, Excel

buildee API

- Connect with existing databases
- Integrates with other software products
